

MARYBOROUGH WATER CYCLE

1. Water is collected from Tinana Creek at Teddington Weir.
2. The water is sent from the weir to the Teddington Water Treatment Plant and made safe for drinking.
3. The clean water is pumped to reservoirs.
4. From the reservoirs, the clean water flows through water mains and pipes under Maryborough, up the pipes of buildings and homes and into taps.
5. Once we've used the water, it goes down the drain and is sent to Wastewater Treatment Plant. It is then made clean enough to use on cane and turf farms and a rainforest plantation.
